Malaria is one of the world's oldest and deadliest diseases. In 1900, nearly every country in the world had malaria—including the United States. Malaria was eliminated in the United States in the 1950s.

PMI helps protect those most at risk, especially pregnant women and young children. More than two-thirds of all malaria deaths are in children under age five.

PMI works where malaria hits hardest, supporting 24 partner countries in sub-Saharan Africa and three programs in the Greater Mekong Subregion in Southeast Asia. PMI partner countries account for approximately 80 percent of all malaria cases worldwide.

The U.S. President's Malaria Initiative (PMI) delivers cost-effective, life-saving malaria interventions alongside catalytic technical and operational assistance to equip and empower partner countries to end malaria. PMI benefits more than 700 million people each year.

Preventing and controlling malaria is a U.S. national security and foreign-assistance priority—and one of the most cost-effective development investments. Thanks to the bipartisan support of Congress and the generosity of the American people, PMI investments bolster the capacity of partner countries to lead malaria control efforts and foster stronger alliances with the United States.

FY 2021 PMI BUDGET
$755m

KEY INTERVENTIONS
PMI provides vital funding for proven interventions such as mosquito nets, insecticides, rapid tests, and medicines. PMI also strengthens health systems to fight malaria, other infectious diseases, and future pandemics through training health workers, improving supply chains, advancing data monitoring, promoting healthy behaviors, and more.

DELIVERED SINCE LAUNCH:

- **+421m** mosquito nets (ITNs)
- **+421m** insecticide to spray
- **+85m** homes (IRS)
- **+144m** preventive treatments in pregnancy (IPTp)
- **+127m** seasonal preventive treatments (SMC)
- **+766m** rapid diagnostic tests (RDTs)
- **+828m** malaria medicines (ACTs)

PMI helps partner countries stay ahead of emerging threats such as insecticide and drug resistance. For example, PMI funds new tools such as next-generation nets and trains local scientists to detect early signs of resistance. PMI programs are also resilient and have continued to protect millions from malaria during the COVID-19 pandemic.

PMI FUNDS MORE THAN 200 mosquito surveillance sites.
PMI FUNDS MORE THAN 100 drug resistance monitoring sites.

PROGRESS
Since 2000, alongside partner countries and the global malaria community, PMI has helped:

<table>
<thead>
<tr>
<th>SAVE</th>
<th>PREVENT</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>10.6m</strong> LIVES</td>
<td><strong>1.7b</strong> MALARIA CASES</td>
</tr>
</tbody>
</table>

Since 2006, in countries where PMI works, global efforts have supported:

<table>
<thead>
<tr>
<th>MALARIA CASE RATES</th>
<th>MALARIA DEATH RATES</th>
</tr>
</thead>
<tbody>
<tr>
<td>↓ <strong>26%</strong></td>
<td>↓ <strong>43%</strong></td>
</tr>
</tbody>
</table>
